EXAMINER

GOODWIN, DAVID J

ART UNIT

PAPER NUMBER

2818

MAIL DATE

DELIVERY MODE

06/23/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/784,591	Applicant(s) BLACK ET AL.	
	Examiner DAVID GOODWIN	Art Unit 2818	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 June 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 20,24,35,37,50,51 and 53-55 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 20,24,35,37,50,51 and 53-55 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 53 is rejected under 35 U.S.C. 102(b) as being anticipated by Chivukula (US 6,066,581).
2. Regarding claim 53.
3. Chivukula teaches a dielectric layer. Said layer is lead zirconate titanate and has a dielectric constant greater than 10 (column 13 lines 15-25). Said layer comprises particles having a diameter between 10 and 15 nm and a uniform size (column 15 lines 1-10). Particles having a uniform size would have a standard deviation of 0%. As the surfactant is removed from the layer, said material does not form part of the layer.
4. Note that a “product by process” claim is directed to the product per se, no matter how actually made. See *In re Thorpe et al.*, 227 USPQ 964 (CAFC, 1985) and related case law cited therein which make it clear that it is the final product per se which must be determined in a “product by process” claim, and not the patentability of the process, and that, as here, an old or obvious product produced by a new method is not patentable as a product, whether claimed in “product by process” claims or not. As stated in *Thorpe*,

Art Unit: 2818

a. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972); *In re Pilkington*, 411 F.2d 1345, 1348, 162 USPQ 145, 147, (CCPA 1969); *Buono v. Yankee Maid Dress Corp.*, 77 F.2d 274, 279, 26 USPQ 57, 61 (2d. Cir 1935).

Note that Applicant bears the burden of proof in such cases as the above case law makes clear.

1. Claims 20, 24, 35, 37, 50, 51, 53, 54, and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leung (US 2002/0137260) in view of Matijevic (US 5,900,223).
2. Regarding claim 37
3. Leung teaches a dielectric layer. Said dielectric layer consists of nanoparticles have a 2nm diameter and having a monodisperse size distribution, which is less than 5% standard deviation (paragraph 0021). The nanoparticles may be coated with a surfactant (paragraph 0021).
4. Leung does not teach the dielectric constant of the material.
5. Matijevic teaches barium titanate nanoparticles (column 12 lines 30-45). Barium titanate has a dielectric constant higher than 10.
6. It would have been obvious to one of ordinary skill in the art to use barium titanate nanoparticles in order to make advanced and superior products which have nanoparticles having good sinterability, dense packing, fine grained structure, and a high dielectric constant further the powders have great usefulness in many applications including dielectrics..

Art Unit: 2818

7. Note that a “product by process” claim is directed to the product per se, no matter how actually made. See *In re Thorpe et al.*, 227 USPQ 964 (CAFC, 1985) and related case law cited therein which make it clear that it is the final product per se which must be determined in a “product by process” claim, and not the patentability of the process, and that, as here, an old or obvious product produced by a new method is not patentable as a product, whether claimed in “product by process” claims or not. As stated in *Thorpe*,

a. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972); *In re Pilkington*, 411 F.2d 1345, 1348, 162 USPQ 145, 147, (CCPA 1969); *Buono v. Yankee Maid Dress Corp.*, 77 F.2d 274, 279, 26 USPQ 57, 61 (2d. Cir 1935).

Note that Applicant bears the burden of proof in such cases as the above case law makes clear.

8. Regarding claim 50.

9. Differences in percentages will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such percentages are critical. “Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the workable ranges by routine experimentation”. *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955).

Since the applicant has not established the criticality (see next paragraph) of the percentages, and this percentages has been used in similar devices in the art (see, e.g.,

Art Unit: 2818

Matijavic column 7 lines 40-50) it would have been obvious to one of ordinary skill in the art to use these values in the device.

CRITICALITY

The specification contains no disclosure of either the critical nature of the claimed thickness or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the applicant must show that the chosen dimensions are critical. *In re Woodruff*, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

10. Regarding claim 51.

11. Differences in percentages will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such percentages are critical. "Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the workable ranges by routine experimentation". *In re Aller*, 220 F.2d 454,456,105 USPQ 233, 235 (CCPA 1955).

Since the applicant has not established the criticality (see next paragraph) of the percentages, and this percentages has been used in similar devices in the art (see, e.g., Matijavic column 7 lines 40-50) it would have been obvious to one of ordinary skill in the art to use these values in the device.

CRITICALITY

The specification contains no disclosure of either the critical nature of the claimed thickness or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the applicant must show that the chosen dimensions are critical. *In re Woodruff*, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

12. Regarding claim 20.

13. Differences in percentages will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such percentages are

Art Unit: 2818

critical. "Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the workable ranges by routine experimentation". *In re Aller*, 220 F.2d 454,456,105 USPQ 233, 235 (CCPA 1955).

Since the applicant has not established the criticality (see next paragraph) of the percentages, and this percentages has been used in similar devices in the art (see, e.g., Matijavic column 7 lines 40-50) it would have been obvious to one of ordinary skill in the art to use these values in the device.

14. Regarding claim 35

15. Differences in percentages will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such percentages are critical. "Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the workable ranges by routine experimentation". *In re Aller*, 220 F.2d 454,456,105 USPQ 233, 235 (CCPA 1955).

Since the applicant has not established the criticality (see next paragraph) of the percentages, and this percentages has been used in similar devices in the art (see, e.g., Matijavic column 7 lines 40-50) it would have been obvious to one of ordinary skill in the art to use these values in the device.

CRITICALITY

16. The specification contains no disclosure of either the critical nature of the claimed thickness or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim,

Art Unit: 2818

the applicant must show that the chosen dimensions are critical. *In re Woodruff*, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

17. Regarding claim 53.

18. Leung teaches that the surfactant is not added (paragraph 0021).

19. Regarding claim 54.

1. In an embodiment where the functional groups are removed from the surface of the nanoparticle note that a “product by process” claim is directed to the product per se, no matter how actually made. See *In re Thorpe et al.*, 227 USPQ 964 (CAFC, 1985) and related case law cited therein which make it clear that it is the final product per se which must be determined in a “product by process” claim, and not the patentability of the process, and that, as here, an old or obvious product produced by a new method is not patentable as a product, whether claimed in “product by process” claims or not. As stated in *Thorpe*,

a. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972); *In re Pilkington*. 411 F.2d 1345, 1348, 162 USPQ 145, 147, (CCPA 1969); *Buono v. Yankee Maid Dress Corp.*, 77 F.2d 274, 279, 26 USPQ 57, 61 (2d. Cir 1935).

20. Note that Applicant bears the burden of proof in such cases as the above case law makes clear.

21. Regarding claim 55.

22. Leung teaches that the solvent is removed (paragraph 0023).

Art Unit: 2818

2. Note that a “product by process” claim is directed to the product per se, no matter how actually made. See *In re Thorpe et al.*, 227 USPQ 964 (CAFC, 1985) and related case law cited therein which make it clear that it is the final product per se which must be determined in a “product by process” claim, and not the patentability of the process, and that, as here, an old or obvious product produced by a new method is not patentable as a product, whether claimed in “product by process” claims or not. As stated in *Thorpe*,

b. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. *In re Brown*, 459 F.2d 531, 535, 173 USPQ 685, 688 (CCPA 1972); *In re Pilkington*, 411 F.2d 1345, 1348, 162 USPQ 145, 147, (CCPA 1969); *Buono v. Yankee Maid Dress Corp.*, 77 F.2d 274, 279, 26 USPQ 57, 61 (2d. Cir 1935).

Note that Applicant bears the burden of proof in such cases as the above case law makes clear.

23. Regarding claim 24

24. Matijev teaches that the particles are barium titanate.

25. It would have been obvious to one of ordinary skill in the art to use barium titanate nanoparticles in order to make advanced superior products which have nanoparticles having good sinterability, dense packing, fine grained structure, and a high dielectric constant.

26. Claim 54 is rejected under 35 U.S.C. 103(a) as being unpatentable over Leung (US 2002/0137260) in view of Matijev (US 5,900,223) as applied to claim 37 and further in view of Yokouchi (US 5,143,637).

Art Unit: 2818

27. Regarding claim 54

28. Leung in view of Matijev teaches elements of the claimed invention above.

29. Leung in view of Matijev does not teach the composition of the surfactant.

30. Yokouchi teaches a particle surfactant comprising a carboxyl group (column 5 lines 25-35).

31. It would have been obvious to one of ordinary skill in the art to coat the particles with carbyl groups in order to increase the dispersion of the particles.

Response to Arguments

32. Applicant's arguments filed 6/4/09 have been fully considered but they are not persuasive.

33. The applicant argues that although the policy of the PTO is not to accord weight to product by process limitations, this was over ruled the precedent and therefore weight should be accorded to product by process limitations.

34. The applicant will note that *Abbott Laboratories v. Sandoz, Inc.*, regards determinations of infringement not the validity. And in fact, as noted by Judge Newman, the majority decision establishes a bifurcation of construction for validity versus infringement.

35. The applicant will further note that it is the practice of the PTO to accord weight to the process steps of a product by process claims to the extent that those process steps differentiate the final product. The burden is on the applicant to demonstrate that the process steps distinguish the product. MPEP 2113. In re Thorpe.

36. The applicant argues that a combination requires a motivation to combine.

Art Unit: 2818

37. In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

38. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Matejevic teaches powders useful for making dielectrics that have superior dielectric properties, size uniformity, and sinterability.

39. The applicant argues that the percentage of particles in the layer is critical.

40. However, neither in the specification nor the remarks does the applicant indicate what benefit is or critical feature is dependent on a specific percentage of particles. To the contrary the applicant claims a broad range 50-100%, which is anticipated by Chivulkula, and then goes on to claim several mutually obvious sub-ranges

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DAVID GOODWIN whose telephone number is (571)272-8451. The examiner can normally be reached on Monday through Friday, 9:00am through 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steven Loke can be reached on (571)272-1657. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
